# Executive summary

*Past performance does not predict future results.*

## Portfolio Performance

The GIS Mortgage Opportunities Fund Institutional Accumulation share class returned 1.39% (net of fees). Agency MBS relative value strategies, exposure to non-Agency RMBS and structured Agency MBS positions contributed to performance during the quarter. Conversely, U.S. duration positioning, exposure to senior CLOs and European duration exposure detracted from performance.

### CONTRIBUTORS

- Agency MBS relative value strategies
- Exposure to senior non-Agency RMBS
- Structured Agency MBS positions

### DETRACTORS

- U.S. duration positioning
- Exposure to senior CLOs
- European duration exposure

*The following information should be read in conjunction with the 12-month rolling past performance information provided later in this presentation*

## Portfolio strategy

**Interest rate strategies:** We tactically adjust our exposure to duration as a way to diversify the spread risk within the portfolio.

**Agency MBS relative value strategies:** We look to adjust our Agency MBS spread exposure as a function of valuations. During the quarter, we decreased our relative Agency MBS spread exposure and continue to find attractive relative value opportunities.

**Mortgage credit strategies:** We remain constructive on mortgage credit, with a preference for senior non-Agency RMBS. We are taking a selective approach to risk-taking in CMBS, and we continue to prefer select ABS and CLOs among high quality spread assets.

# Fund specific risks

---

Risk	Risk Description
<b>Credit and Default Risk</b>	A decline in the financial health of an issuer of a fixed income security can lead to an inability or unwillingness to repay a loan or meet a contractual obligation. This could cause the value of its bonds to fall or become worthless. Funds with high exposures to non-investment grade securities have a higher exposure to this risk.
<b>Currency Risk</b>	Changes in exchange rates may cause the value of investments to decrease or increase.
<b>Derivatives and Counterparty Risk</b>	The use of certain derivatives could result in the fund having a greater or more volatile exposure to the underlying assets and an increased exposure to counterparty risk. This may expose the fund to larger gains or losses associated with market movements or in relation to a trade counterparty being unable to meet its obligations.
<b>Liquidity Risk</b>	Difficult market conditions could result in certain securities becoming hard to sell at a desired time and price.
<b>Interest Rate Risk</b>	Changes in interest rates will usually result in the values of bond and other debt instruments moving in the opposite direction (e.g. a rise in interest rates likely leads to fall in bond prices).
<b>Mortgage Related and Other Asset Backed Securities Risks</b>	Mortgage or asset backed securities are subject to similar risks as other fixed income securities, and may also be subject to prepayment risk and higher levels of credit and liquidity risk.

# Quarter in Review

## The mortgage market continues to offer compelling relative value opportunities at attractive valuations

Agency MBS<sup>1</sup> returned -1.04% in the first quarter, underperforming like-duration Treasuries by 14 bps. Legacy non-Agency residential MBS spreads tightened during the quarter while non-Agency CMBS2 returned 1.97%, outperforming like-duration Treasuries by 240 bps.

### Volatility-Adjusted MBS Spreads

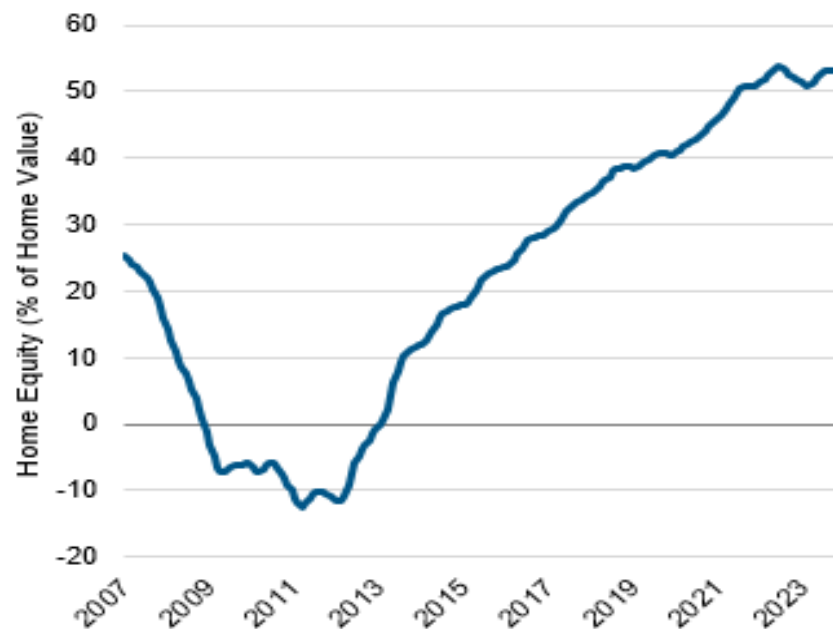

Spreads widened during the first quarter and Agency MBS valuations remain at attractive levels from a historical standpoint.

<sup>2</sup> Represented by the Bloomberg Investment Grade Non-Agency CMBS Index

### Homeowner Equity

Senior non-Agency MBS fundamentals remain robust despite challenged affordability.

Homeowner equity measured by 100% - loan to value ratio.

# Market Summary

## Mortgages underperformed during the quarter as spreads widened..

Agency MBS widened in Q1 and remain at attractive levels.

### Interest rates

U.S. interest rates increased during the quarter and we decreased the Fund's duration exposure. We continue to utilize interest rate options to help hedge extension and prepayment risk.

### Agency MBS

Agency MBS underperformed like-duration Treasuries during the quarter, with higher coupons outperforming lower coupons. GNMA MBS outperformed conventional MBS during the quarter.

### Mortgage credit

We continue to maintain exposure to senior non-Agency RMBS and CMBS. Senior non-Agency MBS stand out as attractive and benefit from the steady U.S. housing market, which is supported by limited long-term supply and strong borrower fundamentals. We are taking a cautious and selective approach in CMBS markets, focusing on securities with stable cash flow profiles that are resilient across a wide range of economic scenarios.

### Bloomberg Fixed Rate MBS quarterly performance

## Investment implications: Opportune time to consider going active in global fixed income

---

### Look global

Greater-than-usual focus on bond markets outside of the U.S.

### Lock in elevated yields

Intermediate maturities can offer a “sweet spot” with markets expecting cash rates to fall

### Favor high quality

Up-in-quality bias in both public and private credit markets

### Go active

Differentiated macro paths present compelling opportunities for active investors

# Portfolio Outlook

## Strategic Positioning

MBS spreads remain at attractive levels when compared historically. Gross issuance was up 18% m/m and flat y/y in March. The Fed continued to allow about \$20bn of MBS to roll off its balance sheet and U.S. mortgage rates decreased to 7.25% in March. Despite elevated mortgage rates, we do not believe that challenged affordability will have a material impact on fundamental quality of non-Agency MBS.

### Key strategies

#### Interest rate strategies

We maintain a moderate absolute long exposure to duration and continue to scale exposure based on interest rate levels and compensation for risk. We believe duration is a useful diversifier to the fund's mortgage credit exposure.

#### Agency MBS relative value

We remained short in lower coupons given continued demand pressures and maintained exposure to higher coupons given stronger valuations and expected carry.

Senior non-Agency MBS remain an area of high conviction given compelling base case yields and seniority in the capital structure. We are taking a cautious and selective approach to CMBS, and we continue to prefer select ABS and CLOs among high quality spread assets.

## PERFORMANCE AND FEE

**Past performance is not a guarantee or a reliable indicator of future results.** The "gross of fees" performance figures, if included, are presented before management fees and custodial fees, but do reflect commissions, other expenses and reinvestment of earnings. The "net of fees" performance figures reflect the deduction of ongoing charges. All periods longer than one year are annualized.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

## Outlook

Statements concerning financial market trends or portfolio strategies are based on current market conditions, which will fluctuate. ## Correlation

As outlined under "Benchmark", where disclosed herein and referenced in the prospectus and relevant key investor information document /Key Information Document, a benchmark may be used as part of the active management of the Fund. In such instances, certain of the Fund's securities may be components of and may have similar weightings to the benchmark and the Fund may from time to time show a high degree of correlation with the performance of any such benchmark. However the benchmark is not used to define the portfolio composition of the Fund and the Fund may be wholly invested in securities which are not constituents of the benchmark.

Investors should note that a Fund may from time to time show a high degree of correlation with the performance of one or more financial indices not referenced in the prospectus and relevant key investor information document /Key Information Document. Such correlation may be coincidental or may arise because any such financial index may be representative of the asset class, market sector or geographic location in which the Fund is invested or uses a similar investment methodology to that used in managing the Fund.

**ESG Category Article 6 Funds:** Article 6 funds do not have sustainable investment as its objective, nor do they promote environmental and/or social characteristics.

**A word about risk: Absolute return portfolios** may not fully participate in strong positive market rallies. Investing in the **bond market** is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by changes in interest rates. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. Mortgage and asset backed securities may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations. **High-yield**, lower-rated, securities involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. **Equities** may decline in value due to both real and perceived general market, economic and industry conditions. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The Fund is **non-diversified**, which means that it may invest its assets in a smaller number of issuers than a diversified fund.

Acronyms and definitions of investment terms used throughout the report:

**Alpha** is a measure of performance on a risk-adjusted basis calculated by comparing the volatility (price risk) of a portfolio vs. its risk-adjusted performance to a benchmark index; the excess return relative to the benchmark is alpha.

**Average coupon** is the average of the coupon payments of the underlying bonds within the portfolio.

**Average effective maturity** is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security.

**"Bend-but-not-break"** refers to credits that PIMCO would not expect to default in a credit-stressed environment.

**Beta** is a measure of price sensitivity to market movements. Market beta is 1.

**Breakeven inflation rate** (or expectation) is a market-based measure of expected inflation or the difference between the yield of a nominal and an inflation-linked bond of the same maturity.

**Carry** is the rate of interest earned by holding the respective securities.

The terms **"cheap" and "rich"** as used herein generally refer to a security or asset class that is deemed to be substantially under- or overpriced compared to both its historical average as well as to the investment manager's future expectations. There is no guarantee of future results or that a security's valuation will ensure a profit or protect against a loss.

**CPI** is the Consumer Price Index.

The **credit quality** of a particular security or group of securities does not ensure the stability or safety of an overall portfolio. The quality ratings of individual issues/issuers are provided to indicate the credit-worthiness of such issues/issuer and generally range from AAA, Aaa, or AAA (highest) to D, C, or D (lowest) for S&P, Moody's, and Fitch respectively.

**Dividend yield** is represented by the weighted average coupon divided by the weighted average price.

**Duration** is the measure of a bond's price sensitivity to interest rates and is expressed in years.

**Effective duration** is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change.

**Forward curve** is a function graph that defines the prices at which a contract for future delivery or payment can be concluded today.

**Fallen angel** is a bond that was initially given an investment grade rating but has since been reduced to below investment grade status.

**GFC** is the Global Financial Crisis.

**Information ratio** is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns.

**Like-duration Securities** are calculated by the index provider by comparing the index return to a hypothetical matched position in the security.

**LNG** is Liquefied Natural Gas.

The **Option Adjusted Spread (OAS)** measures the spread over a variety of possible interest rate paths. A security's OAS is the average return an investor will earn over Treasury returns, taking all possible future interest rate scenarios into account. The OAS is the net spread over the swap curve that will on average be earned if the security is held to maturity.

**Rising star** is the term given to a bond that was rated high yield but has since been upgraded to investment grade.

**"Risk assets"** are any financial security or instrument that are likely to fluctuate in price.

**Risk premia** is the return in excess of the risk-free rate of return an investment is expected to yield.

**Roll yield** is the yield that a futures investor captures as their long position in a futures contract converges to the spot price.

**"Safe haven"** is an investment that is expected to retain or increase in value during times of market turbulence.

**"Safe Spread"** is defined as sectors that we believe are most likely to withstand the vicissitudes of a wide range of possible economic scenarios. All investments contain risk and may lose value.

The **SEC yield** is an annualized yield based on the most recent 30 day period. The subsidized yield includes contractual expense reimbursements and it would be lower without those reimbursements. The

**Unsubsidized 30 day SEC Yield** excludes contractual expense reimbursements.

**Tracking error** measures the dispersion or volatility of excess returns relative to a benchmark.

To relate the price sensitivity of ILBs to changes in nominal yields, yield beta is applied to nominal changes to arrive at a price sensitivity of ILBs to changes in nominal rates. A **yield beta** of 0.90 implies that if nominal yields move 100 basis points, real yields will move 90 basis points. ILBs with long maturity may respond differently to changes in nominal rates than shorter maturity ILBs.

The distribution yield for monthly paying Funds is calculated by annualizing actual dividends distributed for the monthly period ended on the date shown and dividing by the net asset value on the last business day for the same period. The distribution yield for quarterly paying Funds is calculated by taking the average of the prior four quarterly distribution yields. The quarterly distribution yields are calculated by annualizing actual dividends distributed for the quarterly period ended on the most recent quarterly distribution date and dividing by the net asset value for the same date. The yield does not include long- or short-term capital gains distributions.
